

Gardenia

Gardenia jasminoides

Height: 8 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 8b

Other Names: Cape Jasmine, Cape Jessamine, Jasmin

Description:

An evergreen flowering plant with sweetly fragrant, elegant white flowers contrasted by deep green, glossy foliage; a wonderful garden accent plant or hedge in warm climates; water more often in extreme heat

Ornamental Features

Gardenia features showy fragrant white flowers at the ends of the branches from late spring to early fall. The flowers are excellent for cutting. It has attractive dark green evergreen foliage which emerges light green in spring. The glossy pointy leaves are highly ornamental and remain dark green throughout the winter.

Landscape Attributes

Gardenia is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It is a good choice for attracting bees and butterflies to your yard. It has no significant negative characteristics.

Gardenia is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Gardenia will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It has a low canopy, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in partial shade to full shade. Keep it well away from hot, dry locations that receive direct afternoon sun or which get reflected sunlight, such as against the south side of a white wall. It does best in average to evenly moist conditions, but will not tolerate standing water. It may require supplemental watering during periods of drought or extended heat. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the foliage in alkaline soils. It is somewhat tolerant of urban pollution. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This species is not originally from North America.
